Electrical Power & Energy Systems

Index to Volume 2: 1980

Author

Aggarwal, R P, Arumugam, N and Pai, M A Load-flow solution by Newton–Richardson method and its adaptation to optimal load dispatch 129

Allam, M F Generalized state-estimation algorithm using network solvability 123

Allam, M F and Rashed, A M H Power system topological error detection and identification 201

Borkowska, B and Przyłuski, A Generalized method of network calculations 58

Cheong, H K and Dillon, T S Extensions to the bounded-set theoretical approach to reliability modelling and calculations for composite generation–transmission systems using a DC load-flow model 169

Côté, G and Laughton, M A Prediction of reserve requirements in generation planning 87

Dechamps, C and Jamoulle, E Interactive computer program for planning the expansion of meshed transmission networks 103

Dillon, T S, Martin, R W and Sjelvgren, D Stochastic optimization and modelling of large hydrothermal systems for long-term regulation 2

Fernandes, R A, Happ, H H and Wirgau, K A Optimal reactive power flow for improved system operations 133

Glanc, Z Uncertainty in operational planning of power system generation 81

Glavitsch, H and Stoffel, J Automatic generation control 21

Henner, V E A network separation scheme for emergency control 109

Kuruganty, P R S and Billinton, R A probabilistic assessment of transient stability 115

Laughton, M A and Saleh, A O M Unified phase-coordinate load-flow and fault analyses of polyphase networks 181

Machowski, J Fast determination of transient stability regions for the second Lyapunov method 207

Manzoni, G, Paris, L, Salvaderi, L and Valtorta, M Application of methods and computing programs to system planning. Part 1: Generation system 147

Manzoni, G, Paris, L, Salvaderi, L and Valtorta, M Application of methods and computing programs to system planning. Part 2: Transmission system 153

Padiyar, K R, Prabhu, S S, Pai, M A and Gomathi, K Design of stabilizers by pole assignment with output feedback 140

Saleh, A O M and Laughton, M A Phase-coordinate load-flow and fault analysis program 193

Singh, C and Patton, A D Models and concepts for power system reliability evaluation including protection-system failures 161

Takeda, S, Nishida, S and Yamaguchi, T Derivation of dynamic equivalents for stability analysis 96

Vähäkylä, P, Hakonen, E and Léman, P Short-term forecasting of grid load using Box–Jenkins techniques 29

Van Cutsem, Th, Horward, J L, Ribbens-Pavella, M and El-Fattah, Y M Hierarchical state estimation 70

Vitins, M Transmission line models for line protection 35

Willems, J L Fault analysis and component schemes for polyphase power systems 43

Title

A network separation scheme for emergency control **Henner, V E** 109

Application of methods and computing programs to system planning. Part 1: Generation system **Manzoni, G, Paris, L, Salvaderi, L and Valtorta, M** 147

Application of methods and computing programs to system planning. Part 2: Transmission system **Manzoni, G, Paris, L, Salvaderi, L and Valtorta, M** 153

A probabilistic assessment of transient stability **Kuruganty, P R S and Billinton, R** 115

Automatic generation control **Glavitsch, H and Stoffel, J** 21

Derivation of dynamic equivalents for stability analysis **Takeda, S, Nishida, S and Yamaguchi, T** 96

Design of stabilizers by pole assignment with output feedback **Padiyar, K R, Prabhu, S S, Pai, M A and Gomathi, K** 140

Extensions to the bounded-set theoretical approach to reliability modelling and calculations for composite generation-transmission systems using a DC load-flow model **Cheong, H K and Dillon, T S** 169

Fast determination of transient stability regions for the second Lyapunov method **Machowski, J** 207

Fault analysis and component schemes for polyphase power systems **Willems, J L** 43

Generalized method of network calculations **Borkowska, B and Przyłuski, A** 58

Generalized state-estimation algorithm using network solvability **Allam, M F** 123

Hierarchical state estimation **Van Cutsem, Th, Horward, J L, Ribbens-Pavella, M and El-Fattah, Y M** 70

Interactive computer program for planning the expansion of meshed transmission networks **Dechamps, C and Jamoulle, E** 103

Load-flow solution by Newton–Richardson method and its adaptation to optimal load dispatch **Aggarwal, R P, Arumugam, N and Pai, M A** 129

Models and concepts for power system reliability evaluation including protection-system failures **Singh, C and Patton, A D** 161

Optimal reactive power flow for improved system operations **Fernandes, R A, Happ, H H and Wirgau, K A** 133

Phase coordinate load-flow and fault analysis program **Saleh, A O M and Laughton, M A** 193

Power system topological error detection and identification **Allam, M F and Rashed, A M H** 201

Prediction of reserve requirements in generation planning **Côté, G and Laughton, M A** 87

Short-term forecasting of grid load using Box–Jenkins techniques **Vähäkylä, P, Hakonen, E and Léman, P** 29

Stochastic optimization and modelling of large hydrothermal systems for long-term regulation **Dillon, T S, Martin, R W and Sjelvgren, D** 2

Transmission line models for line protection **Vitins, M** 35

Uncertainty in operational planning of power system generation **Glanc, Z** 81

Unified phase-coordinate load-flow and fault analyses of polyphase networks **Laughton, M A and Saleh, A O M** 181
